INC-2291 postmortem: ops-api brownout

Duration: 47 minutes. Impact: roster and duty reports slow or failing.

Cause: a connection-pool leak in the roster endpoint after a deploy.

Detection: pager-bot alert on p95 latency, 4 minutes after deploy.

Fix: rollback, then a patch closing connections on the error path.

Follow-ups: pool saturation alert; load test in CI.

Example data: everything in this document is made up.
